# MINDERWERTIG

# Layout

## 1. Padding

Generally speaking we use a padding of **10px** on all wrappers to achieve a unified look. This includes both horizontal and vertical. The only exception we have is for the menu which is **15px** horizontally.

## 2. Margin

As with padding we use a similar layout. Between elements there should be a **10px or multiply of 5** distance if not specificially defined below.

## 3. Widths

Generally speaking we will use percentage widths to make it as responsive as possible. We focus on a viewport of approximately **320px - 480px** in width (which covers most modern phones).

## 4. Important heights
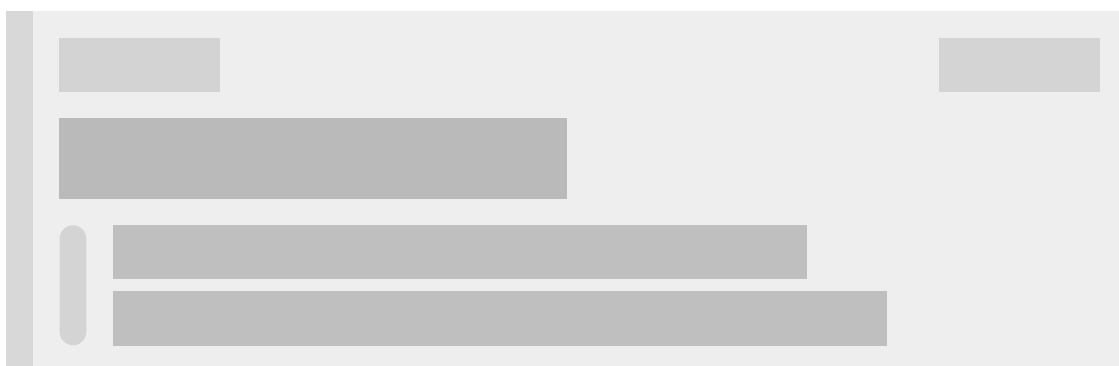

Normal button - **64px**
Small button - **48px**
Menu - **64px**
Submenu - **40px**
Alert popup - **60px**

## 5. Examples

### 1. Bookings
Above is an example of the layout of a booking card. As you can see all of the elements uses **10px** except for the destination text which uses **5px** of margin between eachother.

### 2. Driving card
Above is an example of the layout of a driving card. As you can see all of the elements uses **10px** except for the destination text which uses **5px** of margin between eachother and the **20px** margin on the button at the bottom.
